Notes:

- (1) In order to adapt to the business development needs of the Group, the classification of power plants has been adjusted according to different types of settlement. The total capacity on-grid mode refers to the settlement of all electricity generated by a power plant with the grid; while the surplus capacity on-grid mode means that a portion of the electricity generated by a power plant is sold directly to the end-user and the surplus electricity is settled with the grid.
- (2) In order to meet the actual operational management needs, the Group has made necessary aggregation and adjustment to the number of power plants under its management, which does not affect the installed capacity of the power plants under its management.
- (3) The operation figures previously announced have been adjusted to be in line with the available accounting figures and to reflect the change(s) in our portfolio of power plants with effect from each transaction's respective completion date.
- (4) The figures provided herein are subject to rounding adjustment and will be subject to other possible adjustments due to accounting procedures.

Shareholders and/or potential investors of the Company are hereby reminded that the information provided above merely represents the preliminary operating performance of the renewable energy power plants beneficially owned by the Group as of 31 December 2021 based on data currently available to the management, and is by no means a representation or a basis of reference or indication of the revenue or profit to be generated or derived by the Group or any financial performance of the Group in Q4 of 2021 or for the twelve months ended 31 December 2021. Accordingly, shareholders and/or potential investors of the Company are advised to exercise caution when dealing in the securities of the Company.

For and on behalf of
Beijing Energy International Holding Co., Ltd.
