Notes:

- (1) The total capacity on-grid mode refers to the settlement of all electricity generated by a power plant with the grid; while the surplus capacity on-grid mode means that a portion of the electricity generated by a power plant is sold directly to the end-user and the surplus electricity is settled with the grid.
- (2) Some of the solar power plants of the Group achieved grid-connection with installed capacity of approximately 261MW in total in Q4 of 2022.
- (3) The Group completed the acquisitions of the entire equity interests in eleven project companies and 49% equity interests in a project company in Q4 of 2022.
- (4) The Group carried out maintenance and repairs on some solar power plants in Q4 of 2022, which resulted in the adjustment of grid-connected capacity of some power plants.
- (5) The figures provided herein are subject to rounding adjustment and will be subject to other possible adjustments due to accounting procedures.

Shareholders and/or potential investors of the Company are hereby reminded that the information provided above merely represents the preliminary operating performance of the renewable energy power plants beneficially owned by the Group and its associates as of 31 December 2022 based on data currently available to the management, and is by no means a representation or a basis of reference or indication of the revenue or profit to be generated or derived by the Group or any financial performance of the Group in Q4 of 2022 or for the twelve months ended 31 December 2022. Accordingly, shareholders and/or potential investors of the Company are advised to exercise caution when dealing in the securities of the Company.

For and on behalf of
Beijing Energy International Holding Co., Ltd.
