Notes:

- (1) The total capacity on-grid mode refers to the settlement of all electricity volume generated by a power plant with the grid; while the surplus capacity on-grid mode means that a portion of the electricity volume generated by a power plant is sold directly to the end-user and the surplus electricity is settled with the grid.
- (2) The Group completed the acquisition of a solar power plant which achieved grid-connected with installed capacity of approximately 100MW in Q1 of 2024.
- (3) There were four solar power plants and a wind power plant self-constructed by the Group achieved grid-connection with total installed capacity of approximately 162MW in Q1 of 2024.
- (4) A solar power plant of the Group achieved grid-connection with installed capacity of approximately 100MW in Q1 of 2024.
- (5) The figures provided herein are subject to rounding adjustment and will be subject to other possible adjustments due to accounting procedures.

Shareholders and/or potential investors of the Company are hereby reminded that the information provided above merely represents the preliminary operating performance of the renewable energy power plants beneficially owned by the Group and its associates as of 31 March 2024 based on data currently available to the management, and is by no means a representation or a basis of reference or indication of the revenue or profit to be generated or derived by the Group or any financial performance of the Group in Q1 of 2024 or for the three months ended 31 March 2024. Accordingly, shareholders and/or potential investors of the Company are advised to exercise caution when dealing in the securities of the Company.
